

### **Segregation and Monitoring of Collateral at Client Level**

Please take a note that from Feb-2023, Upfront margin should be compulsorily available with client before punching trade and it's allocation should be also done at exchange level on real time basis else penalty would be levied by exchange.

In this regards we are having module as Client Limit which you are already using for BOD / EOD reporting and you need to use the same for real time reporting also. Please go through the same option and discuss the matter with your team and share your views to us or let us know if any suggestion / changes required.
